

WATERFRONT NEWSTEAD CASE STUDY

Waterfront Newstead is a unique urban development offering:

- Stunning panoramic views
- A convenient and accessible location
- An outstanding array of facilities
- Well designed, high quality residences

The Waterfront Pier apartments are located on a 375 metre stretch of the Brisbane River facing north only 2 kilometres from the Brisbane CBD, creating a new benchmark in apartment living.

The Waterfront Newstead project was developed by Mirvac, an award winning, integrated real estate property development company, with an unmatched reputation. Jacques products were identified by Mirvac designers and engineers as the best in the market due to their quality, features, cost effectiveness and efficiency.

The IP Video Intercom System which Jacques has supplied to Newstead Waterfront includes the following:

Hands free Monitor Stations, in custom white.

- Jacques can provide the monitor stations in most colours to suit customer design requirements.
- Jacques Monitor Stations can also be supplied with handsets which are suitable for noisy environments or areas requiring privacy.

Two 19" Lobby Stations with mapping capabilities for the main entrances.

These Lobby Stations have a large LCD touchscreen display with an inbuilt camera and microphone which allow the apartment resident to view and speak with their visitor once a call is made to their apartment.

- The touchscreen allows a visitor to key in the apartment they are visiting
- Speak to the person in the apartment
- After being granted access to the lobby, a map of how to get to the dialled apartment is displayed.

Other access points feature Keypad Entrance Stations with a graphical LCD, a camera and keypad.

These stations allow the visitor to:

- key in the number of the apartment they are visiting
- be seen by the apartment resident once they have placed a call to the apartment
- hold a conversation with the resident of the apartment once their call has been accepted
- gain access once the apartment resident has remotely opened the door from the Monitor Station in their apartment

Single Button Entrance Stations are also available. These units incorporate a camera but differ from other Entrance Stations by being preconfigured to call one destination such as a security desk or reception area.

Jacques has a wide selection of devices that can be integrated with the IP Video Intercom system to suit customer needs including:

- Help Points
- Call monitoring
- Car park assistance
- Public Address zones
- Integration to third party systems such as CCTV, BMS, SMS and access control
