JACQUES

## Project References

Jacques is a well established leader in the design and manufacture of Integrated Communication Systems. The Jacques 650 Series Integrated Communications System uses IP technology to create a fully digital, networked intercommunications and public address (PA) system with control and monitoring functions.

We continue to be involved in many interesting and prestigious large scale projects in Australia, New Zealand, the Middle East and South East Asia. Our professional intercom and public address systems are regularly installed in high rise buildings including lift cars, building access, security and emergency evacuation. Projects with a more secure focus include prisons, detention centres, courthouses, police stations and watch houses.

Jacques have also completed a number of projects in the transport Industry and have developed public address and Help Point systems for fixed infrastructure and onboard communication solutions. These projects include rail, bus, ships, motorways, tunnels and airports.

Public Safety is another area where Jacques products have widespread use. Our systems are installed in shopping centres, universities, schools, public parks, sporting complexes and tourist venues.
