

ACCESSIBLE BATHROOM INTERCOM

The Jacques accessible bathroom intercom solution is designed to provide a convenient and reliable emergency call point for people with disability. The intercom installed on the wall is a customised Jacques VSL-352Q+ stainless steel audio intercom that features both call and cancel buttons. The solution also features a pull cord that hangs from the ceiling that is connected to the intercom via internal wiring in the bathroom wall. The pull cord provides another method of calling for emergency help. The intercom triggers a relay that activates a strobe light above the entrance of the bathroom. The strobe light as well as a siren (if installed) is activated when the call button is pressed and/or the pull cord is activated. With both the intercom and the pull cord being able to initiate a call this solution has a redundancy setup so if one device fails the other can be used. This ensures that reliable communication is maintained.

FEATURES

- Customised VSL-352Q+ (2 button stainless steel audio intercom with call and cancel buttons)
- Pull cord linked to intercom via internal wiring in the wall of the bathroom
- Intercom linked to external strobe light and siren (if installed)
