

JACQUES TO INNER RANGE HIGH LEVEL INTERFACE

PRODUCT CODE SOF116-INTEGRITI

OVERVIEW

The Jacques to Inner Range High Level Interface (HLI) allows the Jacques Integrated Communication System (650 series) to send events to the Integrati Security Management System for control at a security workstation. Jacques intercom devices deployed throughout a site can be linked with doors, parking gates, and cameras within the Integrati Security Management System. Security personnel can then effectively respond and manage any incoming intercom calls and other Intercom events directly from the Integrati graphical user interface (GUI) providing both a streamlined workflow and circumstantial awareness.
